

Dairy cows produce milk, which can be made into cheese, yogurt, butter and cream.

Each year, UK dairy cows produce enough milk to fill 6,000 Olympic-sized swimming pools.

A cow can produce up to 90 glasses of milk a day.

Milk is a good source of calcium and helps to build teeth and bones.

Dairy farming - did you know?

Farmers look after the countryside maintaining hedgerows and the fields.

An average cow chews 50 times per minute.

Most British dairy cows eat grass in the field during summer and silage (preserved grass or maize) in the winter.

Each cow has a passport and is identified with an ear tag.

Happy and healthy cows are the number one priority on the farm.
